Profesor

Ingeniero en Organización Industrial y Máster en Gestión de TI. Ha cursado programas ejecutivos en Gestión de proyectos, Liderazgo e Industria 4.0. Certificado en Prince2, ScrumMaster, Kanban, LeanIT e ITIL4. Ha participado y dirigido proyectos industriales, organizacionales, tecnológicos y de evolución de software durante más de 15 años, tanto en empresa privada de ámbito nacional e internacional, como en modalidad consorcio cofinanciado con fondos públicos. Su trayectoria se ha centrado en sectores Industria, Transporte, Logística y Cadena de Suministro. Actualmente trabaja en DHL Supply Chain como IT Business Partner, y viene a compartir las claves, según su experiencia, para conseguir llevar los proyectos a buen puerto.

¿Cuáles son tus expectativas en este curso?

La gestión de proyectos incluye procesos de planificación, ejecución y control que permiten el cumplimiento de los objetivos del proyecto. A lo largo de estos procesos se gestionan las áreas claves de un proyecto: alcance, tiempo, recursos, calidad y riesgos.

Una efectiva gestión de proyectos permite un buen uso de recursos del proyecto, un buen control de costes y el cumplimiento de plazos del proyecto. Todo ello debe realizarse con un liderazgo motivador que permita sacar el mayor potencial del equipo del proyecto. Por ello, en este programa se abordan aspectos fundamentales de gestión y liderazgo.

Este programa aporta a los asistentes el conocimiento, las técnicas y herramientas para la gestión eficaz de los proyectos.

Qué conseguiremos

- Aprender las fases del ciclo de gestión de un proyecto.
- Aprender sobre las áreas claves de conocimiento en proyectos (PMBOK: Project Management Body of Knowledge).
- Explorar sobre los dilemas y compromisos a la hora de gestionar las tres palancas claves de un Proyecto: alcance, recursos y tiempos.
- Entender los aspectos críticos en la gestión de las personas en un proyecto.
- Reaccionar a eventos imprevistos y gestionar la incertidumbre.

Metodología

La metodología incluye:

- Discusión de casos de éxito.
- Trabajo en equipo.

Contenidos

1. Fases del ciclo de gestión de un proyecto.
2. PMBOK (*Project Management Body of Knowledge*).
3. Alcance, Recursos y Tiempos.
4. Gestión del equipo de Proyecto.
5. Gestionar la incertidumbre en la Gestión de Proyectos.

Tools & Techniques

What is a project?

What are the characteristics of a project?

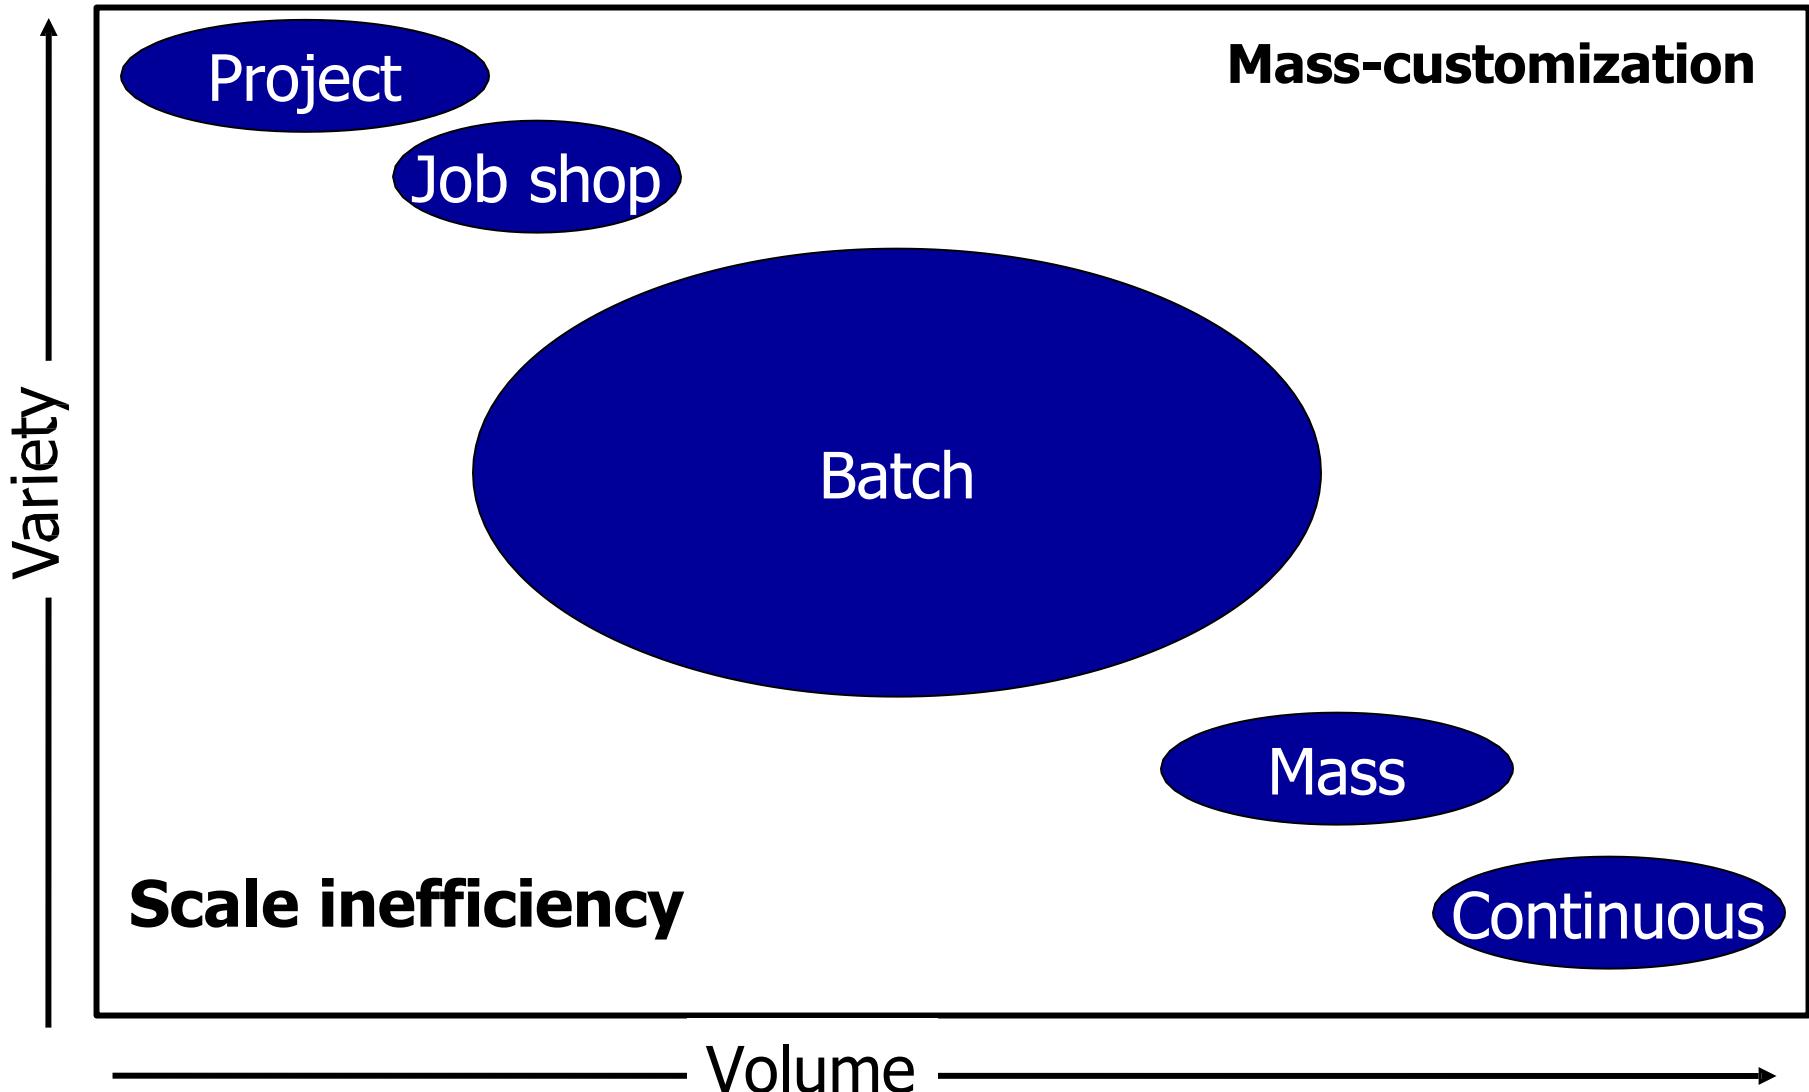

Project as a production process

- Product: they are all unique
- Discrete and highly customized products
- Low volume and high variety
- Product is often too big making it difficult to move after it is completed
- High level of work-in-progress
- Delivery time, customer specifications and budget.

Manufacturing process types

Oresund Bridge, Sweden / Denmark

But projects come in many forms:

- A project is a “one-off”, not a repetitive undertaking
- Temporary nature
- Projects have a defined beginning and end
- All projects have to deal with some uncertainty

A few behaviors defining this competency:

- Do everything possible to meet goals or deadlines
- Consistently meet or exceed commitments
- Aggressively pursue all assignments and projects until completion

Project Management *is* Strategic Execution

What does project management bring to strategic execution?

Portfolio Management

Organizes executive-level strategic direction into portfolios of project-based work; each prioritized, sequenced and resourced appropriately

Governance and Oversight

Provides a methodology for tracking actual vs. estimated work effort, delivery of anticipated outcomes, budgetary and performance metrics, benefit realization and milestone-based funding gates

Project Management

Recognized standard methodology and approach to organizing, planning, monitoring and controlling task-based work designed to deliver a specific outcome

Resource Management

Track and report on organizational resources allocated to the strategic plan.

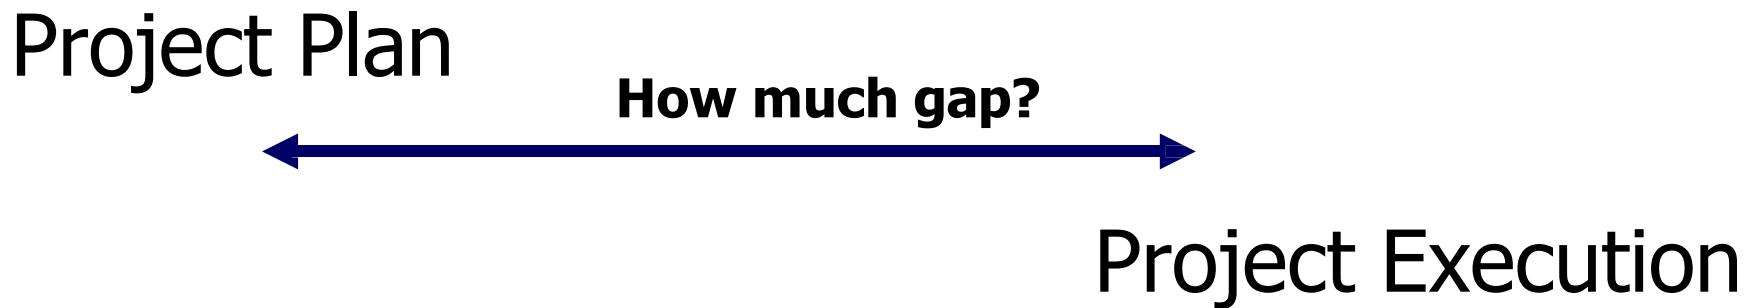

Communications Management

Information collection, formatting and dissemination from a “single source of truth”

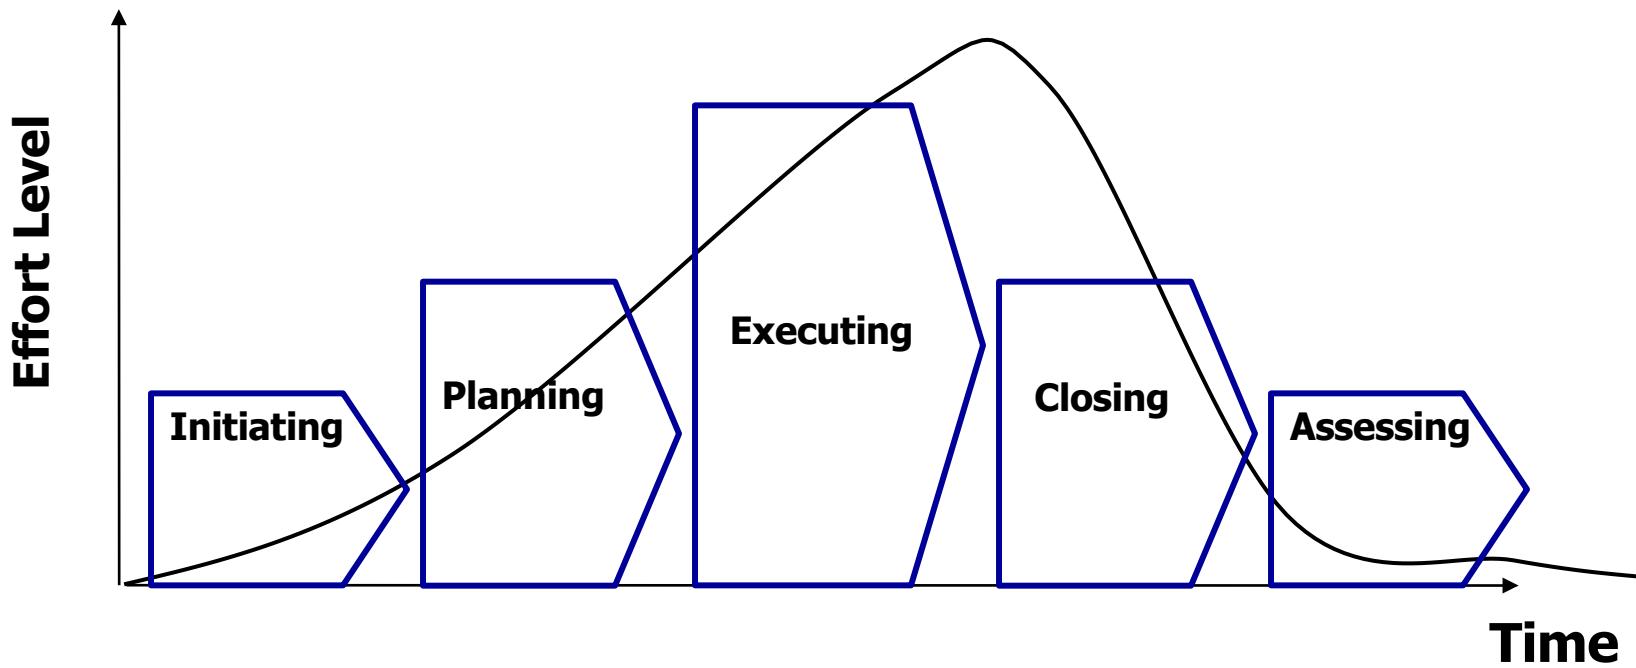

The prosperity of an organization is based on adding value to the business. This is achieved through the continuous implementation of projects throughout the organization. If these projects are successfully implemented, the company will achieve better bottom line results.

Projects fail at alarming rates

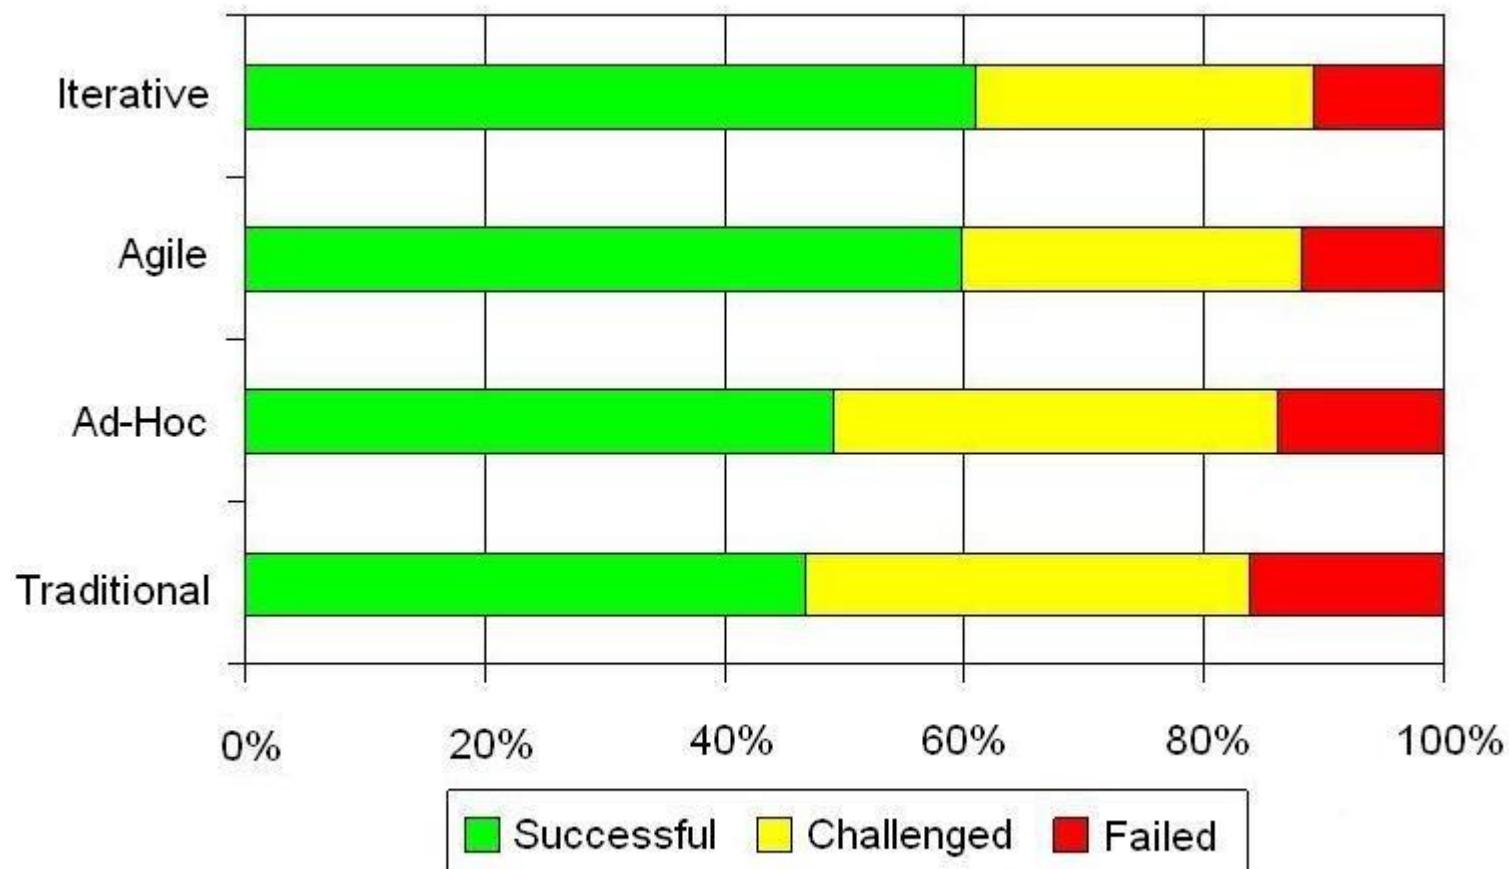

Project Management Success Remains Surprisingly Rare

- On average 16% of projects are successful
- 31% of projects are abandoned
- 53 % overrun their budgets by a factor of 2
- In large companies the rate of success is only 9%

Project office as the support infrastructure for project management

Project-based management:

- A project office is composed of a team of people dedicated to improving project practice in an organization
- Objectives:
 - To facilitate rather than execute change processes
 - To develop a project culture within the organization
 - To manage the project portfolio and prioritization

Project Management Institute (PMI)

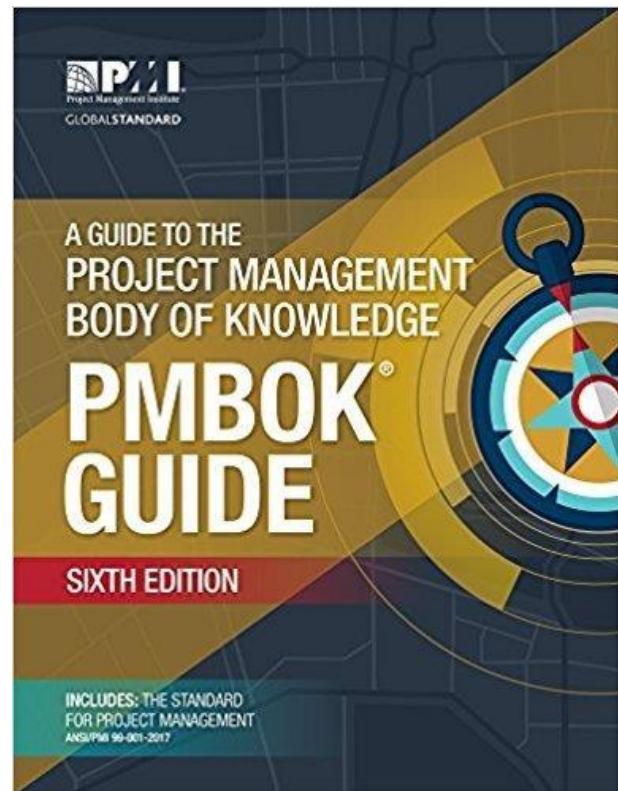

El Project Management Institute (PMI) es una organización sin fines de lucro que asocia a profesionales relacionados con la Gestión de Proyectos. Desde principios de 2011, es la más grande del mundo en su rubro, dado que se encuentra integrada por cerca de 500.000 miembros en casi 100 países. Sus principales objetivos son:

- ✓ Formular estándares profesionales.
- ✓ Generar conocimiento a través de la investigación.
- ✓ Promover la Gestión de Proyectos como profesión a través de sus programas de certificación.

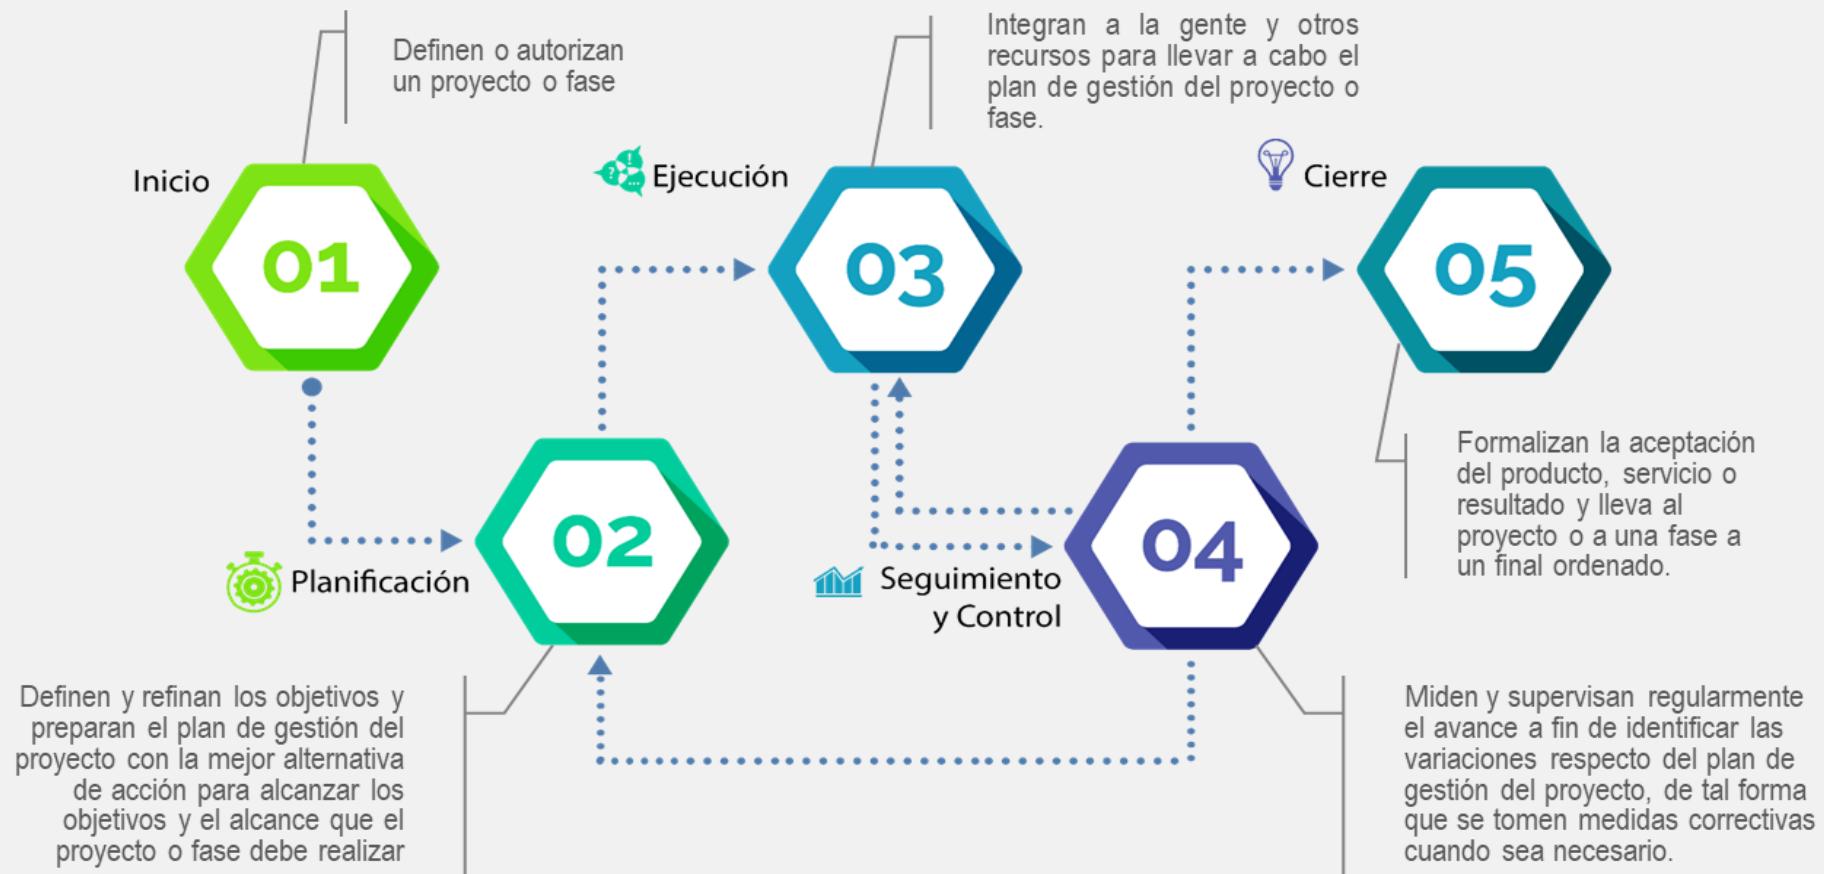

Project Management Body of Knowledge

La Guía del PMBOK (del inglés Project Management Body of Knowledge), desarrollada por el Project Management Institute, contiene una descripción general de los fundamentos de la Gestión de Proyectos reconocidos como buenas prácticas para lograr una dirección eficaz y eficiente del proyecto. Observar que no es una metodología de gestión de proyectos.

PROJECT MANAGEMENT SIMULATION

Hands-on opportunity to explore the complexities of managing projects through rapid experimentation.

- Setting and changing project parameters and observing effects on project outcomes.
- Managing team dynamics
- Post-simulation discussion to summarize learning experience.

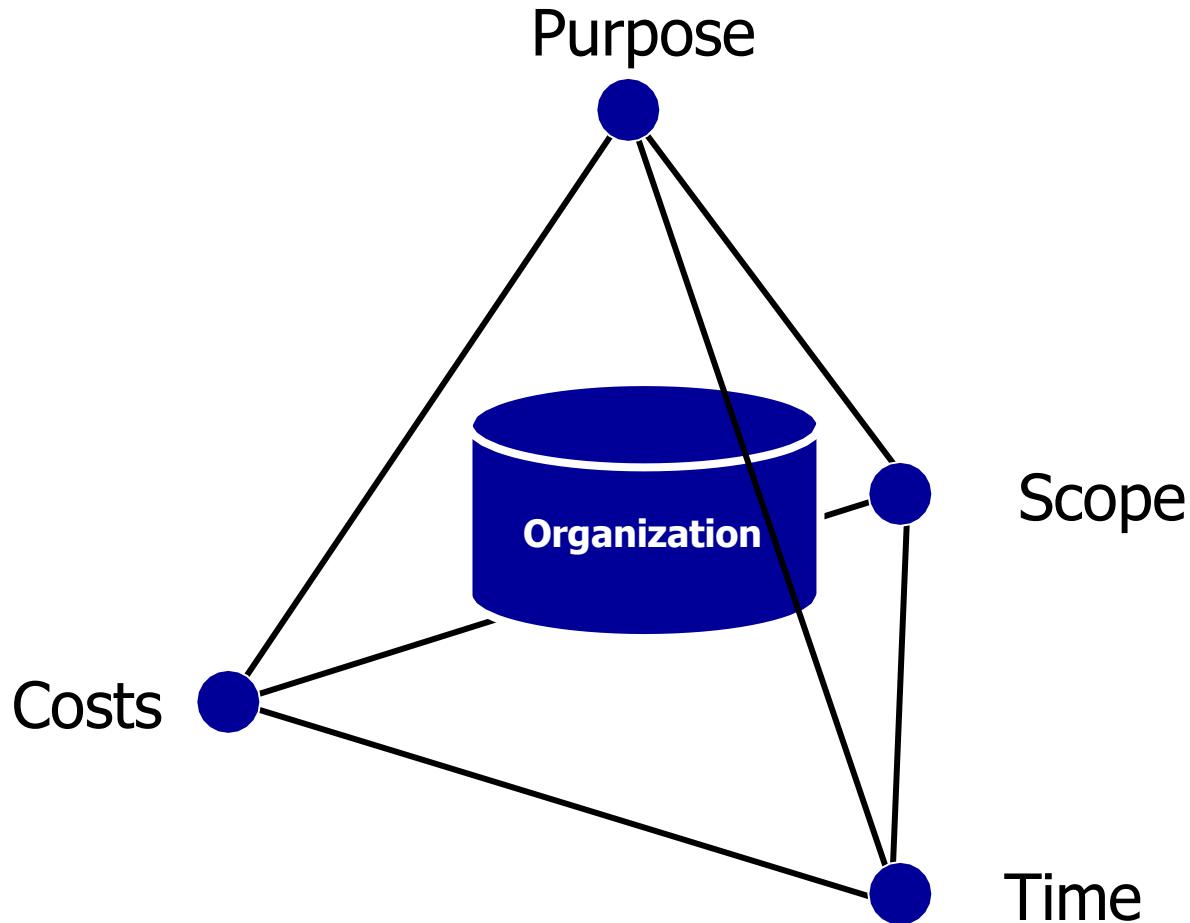

The aim of the simulation:

- ✓ Allow an active learning experience.
- ✓ Create and stimulate a useful practical discussion that can improve understanding and yield better outcomes in practice.
- ✓ Discover causal relationships between actions and project outcomes.
- ✓ Understand critical Human Resources issues in project management
- ✓ Enhance leadership skills by having different roles on each scenario
- ✓ Identify basic better project management principles for top management

As you go through the simulation:

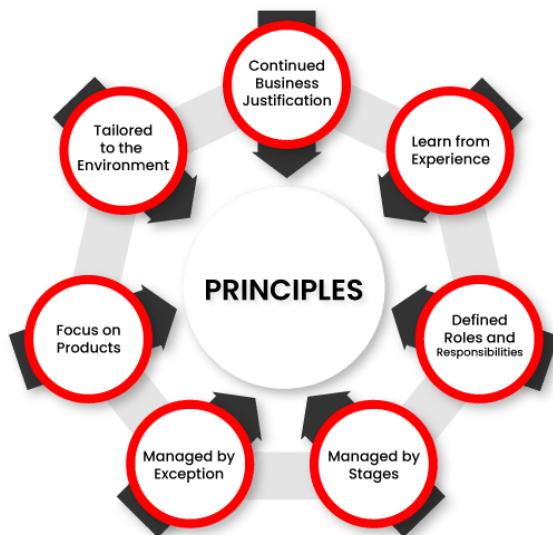

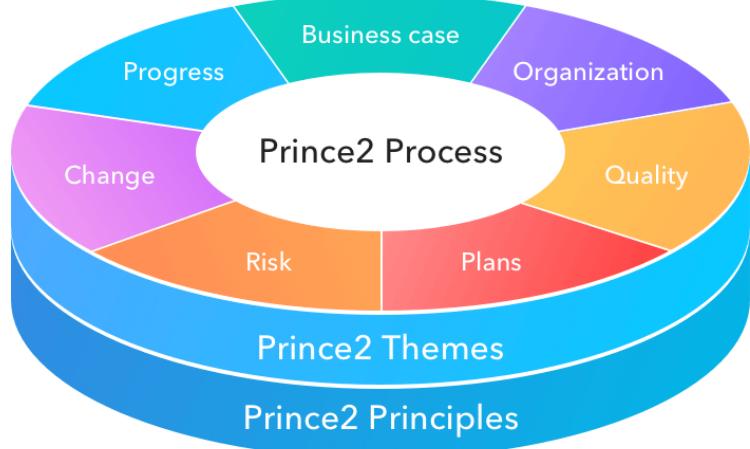

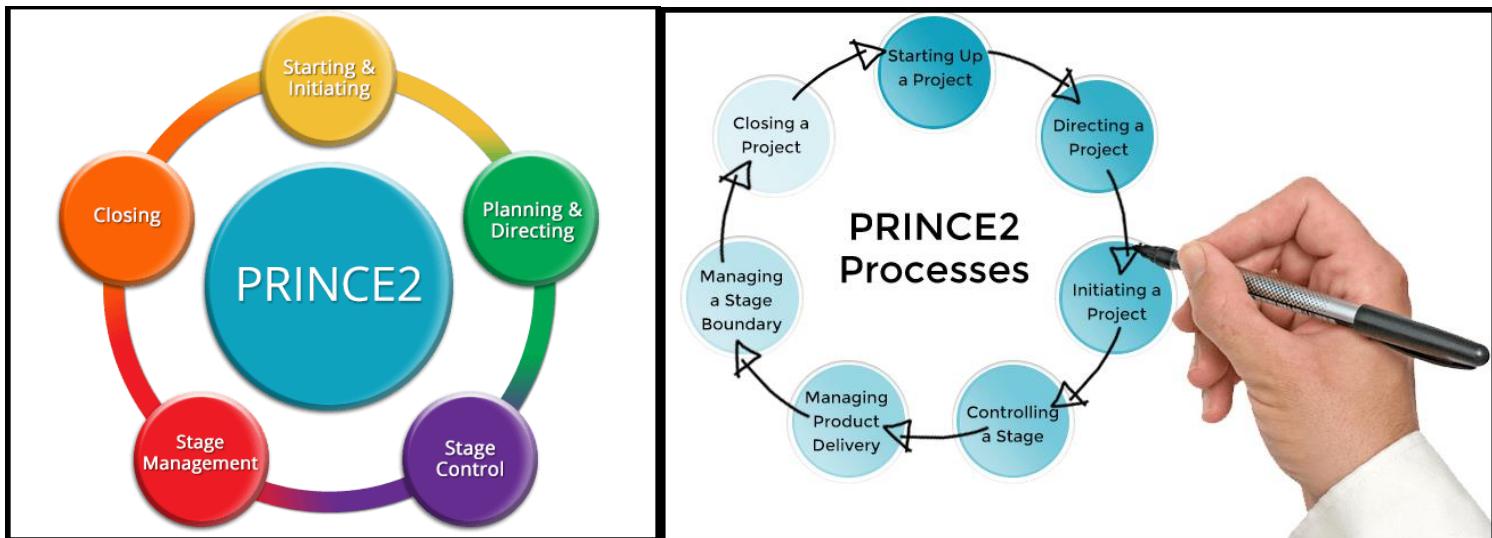

- ✓ How varying decision parameters (target scope, team size, team skill level, amount of outsourcing, target completion date, overtime allowed, time in meetings) affect project outcomes (task completed, cost incurred, productivity, new problems discovered, projected completion date) and team attributes (moral, stress levels and rate of mistakes)
- ✓ What causes each effect? What explains the causal relationships you have discovered?
- ✓ What strategies did you attempt in managing your projects? What worked? What did not?

Communication Flowchart

Flowcharts provide a visual representation of a process or processes which often allow a better understanding of how the process is intended to work. Project communication is an enterprise-wide activity that involves the entire project and the entire set of stakeholders. A flowchart provides all stakeholders with a better understanding of the steps involved with the distribution of all project communications.

The communication flowchart below was created to aid in project communication. This flowchart provides a framework for the project team to follow for this project. However, there may be occasions or situations which fall outside of the communication flowchart where additional clarification is necessary. In these situations the Project Manager is responsible for discussing the communication with the Project Sponsor and making a determination on how to proceed.
